2025**

# Sustained activity in support of the SDGs and French and European priorities

**In 2025,** AFD Group consolidated its commitment to sustainable, inclusive, safe, efficient, and low-carbon transport. Its work focused on urban mobility, national connectivity, and international transport, in various contexts and countries. As transport-related emissions continue to rise and geopolitical tensions push the sustainable transport agenda down the list of priorities, AFD Group remains committed to integrating climate, gender equality, and governance issues into the sector, while ensuring strong participation by French and European companies.

## Key trends in 2025

- Low-carbon transport, a major lever for the green transition and improved quality of life, remained our priority.
- Investment focused on cross-border logistics corridors.
- Corporate financing supported good governance and operators' sustainability strategies.

## Key figures

**€833 M**  
committed in 2025

**139**  
projects underway, including  
29 committed to in 2025

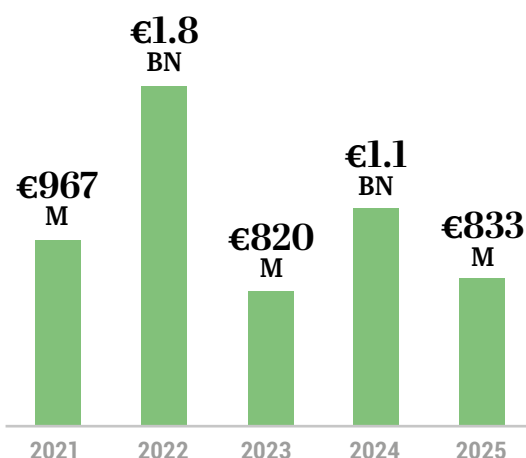

**50**  
countries or  
territories concerned

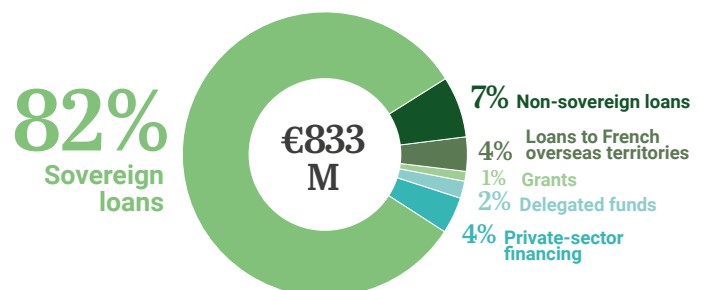

## AFD Group's commitments

5-YEAR TRENDS

BREAKDOWN BY FINANCIAL TOOL (2025)

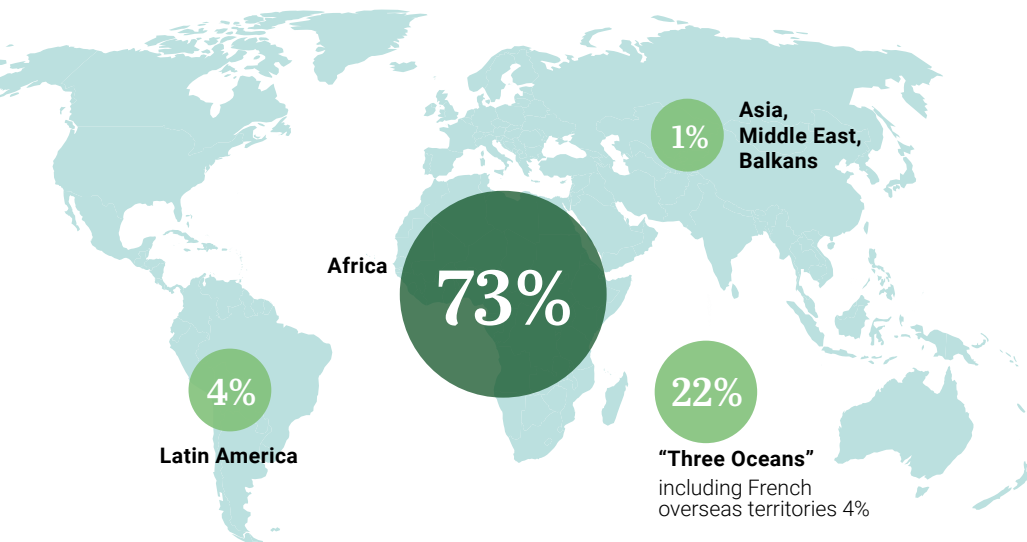

The past five years have seen sustained activity, with an average level of around €1.1 BN in annual commitments. Our actions cover a wide range of sub-sectors, including urban mass transport, bus networks, infrastructure (rail, ports, airports), urban development, and road safety. They have involved a variety of financial tools as well as technical assistance, while also mainstreaming our cross-cutting priorities of climate protection, social cohesion, and gender equality.

## MOBILITY AND TRANSPORT

## ACTIVITY REPORT 2025

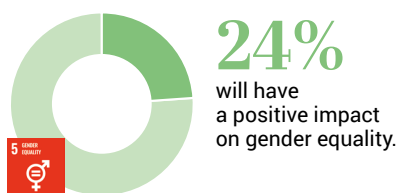

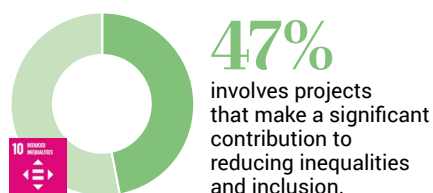

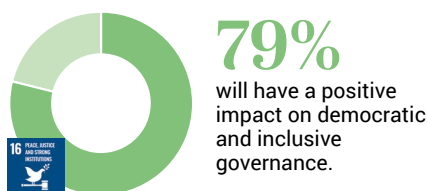

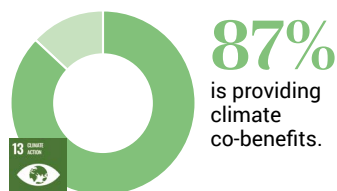

### On the ground

#### GEOGRAPHIC BREAKDOWN OF AFD COMMITMENTS

In 2025, AFD Group commitments were divided among the modernization of national connectivity infrastructure (52% for roads, railways, and interregional networks), sustainable urban mobility (40%, with a focus on low-carbon public transport and social inclusion), and integration into international trade (7% for ports, strengthened logistics corridors, and cross-border connections).

#### EXPECTED ADDITIONAL IMPACTS ON THE SDGS OF MOBILITY AND TRANSPORT PROJECTS LAUNCHED IN 2025 (in % of our financing for Mobility & Transport projects)

### AFD and Team France: partners for more sustainable mobility in Santo Domingo

AFD has provided transport system modernization support to the Dominican Republic over the past 15 years. A key achievement of this Franco-Dominican cooperation is the Santo Domingo metro, which is a pillar of sustainable and inclusive mobility. The project has mobilized French companies such as Alstom (for supplying metro cars and extending lines 1 and 2), as well as Ingérop and Egis (for engineering and studies). Economic ties between the two countries have been bolstered by this combination of development and industrial expertise.

Achievements of projects completed by AFD between 2023 and 2025:

**17.5 million**

people have gained improved access to sustainable transport infrastructure and services.

**214 km**

of urban mass public transport lines have been created or rehabilitated.

Achievements of new projects granted in 2025

**1.1 million**

people use public transport financed by AFD Group projects on a daily basis.

**1.05 Mt CO<sub>2</sub>/year**

will be avoided, thereby supporting the implementation of effective policies and the adoption of green technologies.

**550 km**

of intercity roads or railways will be created or rehabilitated (not including rural roads).

### Did you know?

In 2025, AFD and the Green Climate Fund (GCF) signed a €110 M agreement for the E-MOTION program for transport electrification (for buses, trains, and ports) in Latin America over seven years. Combining AFD loans and GCF subsidized loans, this innovative initiative is speeding up transport decarbonization, in line with the Paris Agreement and the SDGs.
